Professional Experience

BPC Inc. — *Systems Engineer*

June 2023 - June 2026

- Engineered a high-scale monitoring application for automated reporting on compute performance using Python, Selenium, Pandas, Flask and Javascript.
- Deployed Jupyter Notebook containers to host data warehouse information for live tracking of inventory.
- Created Whatsapp and Telegram bots to assist administrators being notified of real-time operational issues.
- Created OCR scripts using OpenCV to extract data from photographs to automate data entry.
- Hosted industry COTS tools such as OBM Foreman monitoring and open source software using Docker for high availability and ease of upgrades.
- Developed Ansible playbooks as infrastructure to automate the provisioning of Command and Control infrastructure when onboarding new clients
- Implemented CI/CD pipeline with GitHub Actions to orchestrate version control and regression testing

Mantech (FBI CJIS contract) — *Systems Engineer*

July 2021 - August 2023

- Migrated functionality and modernized the Next Generation Identification (NGI) system at the FBI's CJIS facility.
- Developed and maintained end-to-end CI/CD pipelines using GitLab CI/CD, automated build, test, and development phases
- Utilized scripting languages (e.g., Python, Bash, PowerShell) and configuration management tools (e.g., Ansible, Puppet) to automate repetitive tasks, configuration baselines, and deployment pipelines across both Windows and Linux environments.
- Deployed, and maintained domains and SSL certs
- Maintenance of system dashboards with Grafana and its data sources such as Prometheus and InfluxDB for over a dozen real-time FBI CJIS systems
- Maintained and updated legacy code, modernizing sections of logic to support the ongoing conversion to microservices architecture
- Automated building and testing of applications using Jenkins.
- Participated in SAFe Agile Methodologies and SDLC lifecycle with coordination between different midsize teams.

Knowledge and Skills

- *Python, Flask, Jupyter Notebooks*
- *Grafana & Prometheus*
- *Ansible automation*
- *Docker & Kubernetes*
- *git*, and administration of team repositories
- *Red Hat Enterprise Linux*
- Data dissemination with *Grafana, SQL, JSON, XML, YAML, and TOML*
- Technical report writing and development of internal IT documentation, techniques, and procedures

Education

Fairmont State University

BS, Information Systems
Management

TMC Technologies (NASA IV&V contract) — *Systems Engineer*

September 2019 - July 2021

- Developed internal tools with Python and Java as part of the Software Assurance Tools team at NASA IV&V
- Identified and prioritized updates and developed testing requirements for various software services
- Designed and deployed self-hosted Sonar Cube instances using Docker, ensuring high availability and secure data persistence for scan results.
- Responsible for writing, maintaining and execution of acceptance testing of available software packages for reliability and security
- Managed backups and implemented additional third party functionality of Atlassian products such as Jira and Confluence for custom workflows
- System administration, configuration, and customer service of facility-wide services such as Nginx, Gitlab, and static code analysis tools

Pierpont Community & Technical College — *Information Systems Analyst*

March 2017 - August 2019

- Maintained, updated, and secured application servers involving Red Hat Enterprise Linux, and the web frameworks Flask, Drupal and Grav
- Deployed and maintained third party application integration along with designing, building, and testing data dashboards for internal and external usage
- Account provisioning and management using G Suite by Google
- Domain administration of over 500 staff and 1500 student accounts and computers with Microsoft Active Directory
- OS image deployment and maintenance of enterprise software
- Purchase ordering of IT equipment for faculty and staff, as well as maintaining inventory management for over 1,200 separate entries
- Office management over student workers consisting of setting/enforcing work schedules, office procedures, and upkeep of a large community college's IT customer service
